Dear Darshan Pavshe,

This is with regard to the Supervised Mensa IQ test held on 14/02/2022. Your result in this test places you in the 95 th percentile.

As you are perhaps aware, the minimum qualification for joining Mensa is placement in the 98th percentile. In view of this, I regret we are unable to offer you Mensa membership at this stage. However, many factors can affect your test results and you are welcome to re-appear for the Mensa IQ test after a gap of one year. If you choose to take the test again, we extend you our best wishes.

I would like to mention that our IQ test measures a narrow range of giftedness, which is generally defined as "Intelligence". Apart from this, one can possess many different kinds of giftedness. Our Mensa IQ test does not measure these. You may not have qualified for Mensa membership but you may still be a genius in so many other fields such as music, arts, sports, dance, writing and other forms of creativity. You may like to explore, and focus on, activities that you have a passion for.

With best wishes,
For Mensa India

Dr. Sujala Watve
(National Supervisory Psychologist)
